TEST CASE MANAGER · DOCUMENTATION

Closed projects

When a project can be closed and how to show closed projects again.

Open and closed

Open

Created, To Do and In Progress.

Closed

Completed and Canceled.

Completing a project

Every active Test Case must be in Done or Excluded.

If some case is still open, the system refuses and says how many are left.

- A project with no Test Cases can be completed.
- Canceling does not depend on the Test Cases.
- You can change the status back later on Projects.

Where closed projects show

Board, Timeline, General Results

List only open projects.

Closed projects filter

Turn it on to see them too. It is off every time the page opens.

Projects

Always lists every project, because that is where the status changes.

Direct links

A link to a closed project still opens it.
