TEST CASE MANAGER · DOCUMENTATION

SDF report

File format, how results change the status and how to undo the last import.

What the system reads

Item	Where it comes from
SDF ID	File name up to the first “_”; once per project
Device	Cell C4; must be a device model of the project
Run date	Cell F4 (Start Time), as 10/21/2026 6:43:35 PM
Results	Table from row 7: Script Name without .py, State, Description
One UI	Test File Path, as OneUI95 for 9.5; must match the project
Skipped	Rows for HQ_precondition.py and Setup.py

Any error refuses the whole file.

Nothing is saved. The message lists the first five problems with their row or cell.

How results change the status

Only In Validation moves

All PASS goes to Done; FAIL in this report goes to In Fixes. Other cases only get the results in their history.

FAIL in this report

An older FAIL on another device does not move the case.

Other values

N/A and anything that is not PASS or FAIL never change the status.

Undo last import

1. You confirm, and the most recent import of the project leaves every screen.
2. Cases it moved go back to In Validation, unless someone moved them afterwards.
3. The End date is recalculated and the SDF ID can be used again.
